

Tax Morale in Africa

Wiebke Weiger & Jasmin Cantzler

13 November 2015

1. Introduction

Our research paper aims to shed light on the determinants of tax morale in African countries by conducting a regression analysis using data from the Afrobarometer for the years 2005, 2008 and 2015. Our conceptual framework is based on commonly perceived determinants of tax morale in developed countries, whereby:

$$TaxMorale_i = \alpha_i + \beta_1 TrustinGovernment_i +$$

This paper briefly outlines the design, operationalization and data selection, before conducting the regression analysis and briefly describing its results. More extensive information will be available in the final report.

2. Method

2.1 Data Design & Operationalization

$$TaxMorale_i = \alpha_i + \beta_1 TrustinGovernment_i + \beta_2 LevelofCorruption_i + \beta_3 Interactionswithothertaxpayers_i + \beta_4 TaxBurden_i -$$

$$TaxMorale_i = \alpha_i + \beta_1 TrustinGovernment_i + \beta_2 LevelofCorruption_i + \beta_3 Interactionswithothertaxpayers_i + \beta_4 TaxBurden_i -$$

$TrustinGovernment_i$ is the

2.2 Data Selection here we can put the summary statistics etc

3. Regression Results
